AI IN CYBERSECURITY

VaaniX

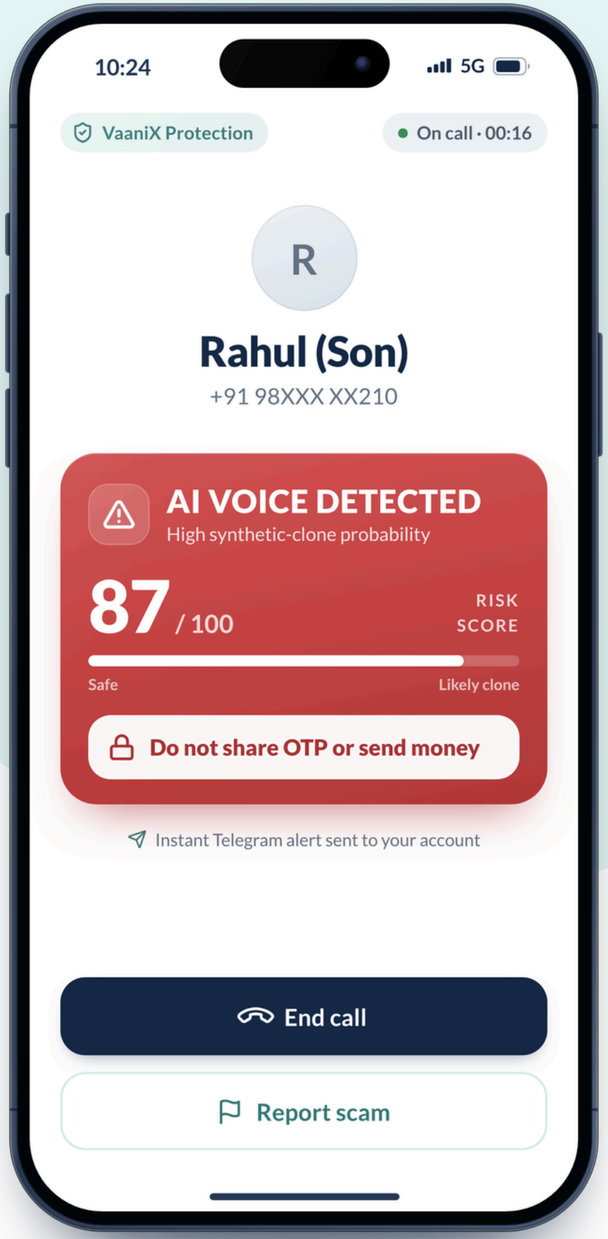

Catch AI voice-clone scams during the call — before the money moves.

VaaniX listens to every call, detects AI-cloned voices with the Nes2Net-X model, and instantly warns you, the family member being faked, and the authorities.

A familiar voice can now be faked in seconds

Scammers clone the voice of a son, a bank officer or a police officer — and use it to create panic.

47%

of Indian adults have faced or know someone hit by an AI voice-clone scam

Global average: 25%

83%

of Indian victims of AI voice scams lost money

Nearly half lost over ₹50,000

10x

rise in reported cyber-fraud losses in India in two years

₹22.9 bn (2022) → ₹228.46 bn (2024)

Few sec

of someone's voice is enough to make a convincing clone

Taken from reels, videos or calls

50 / 50

Humans spot high-quality deepfake audio at about chance level

Our ears alone can't protect us

0

people get warnings today while the scam call is still going on

That's the gap VaaniX fills

How the scam plays out

Scammer copies a few seconds of your son's voice from Instagram or a call

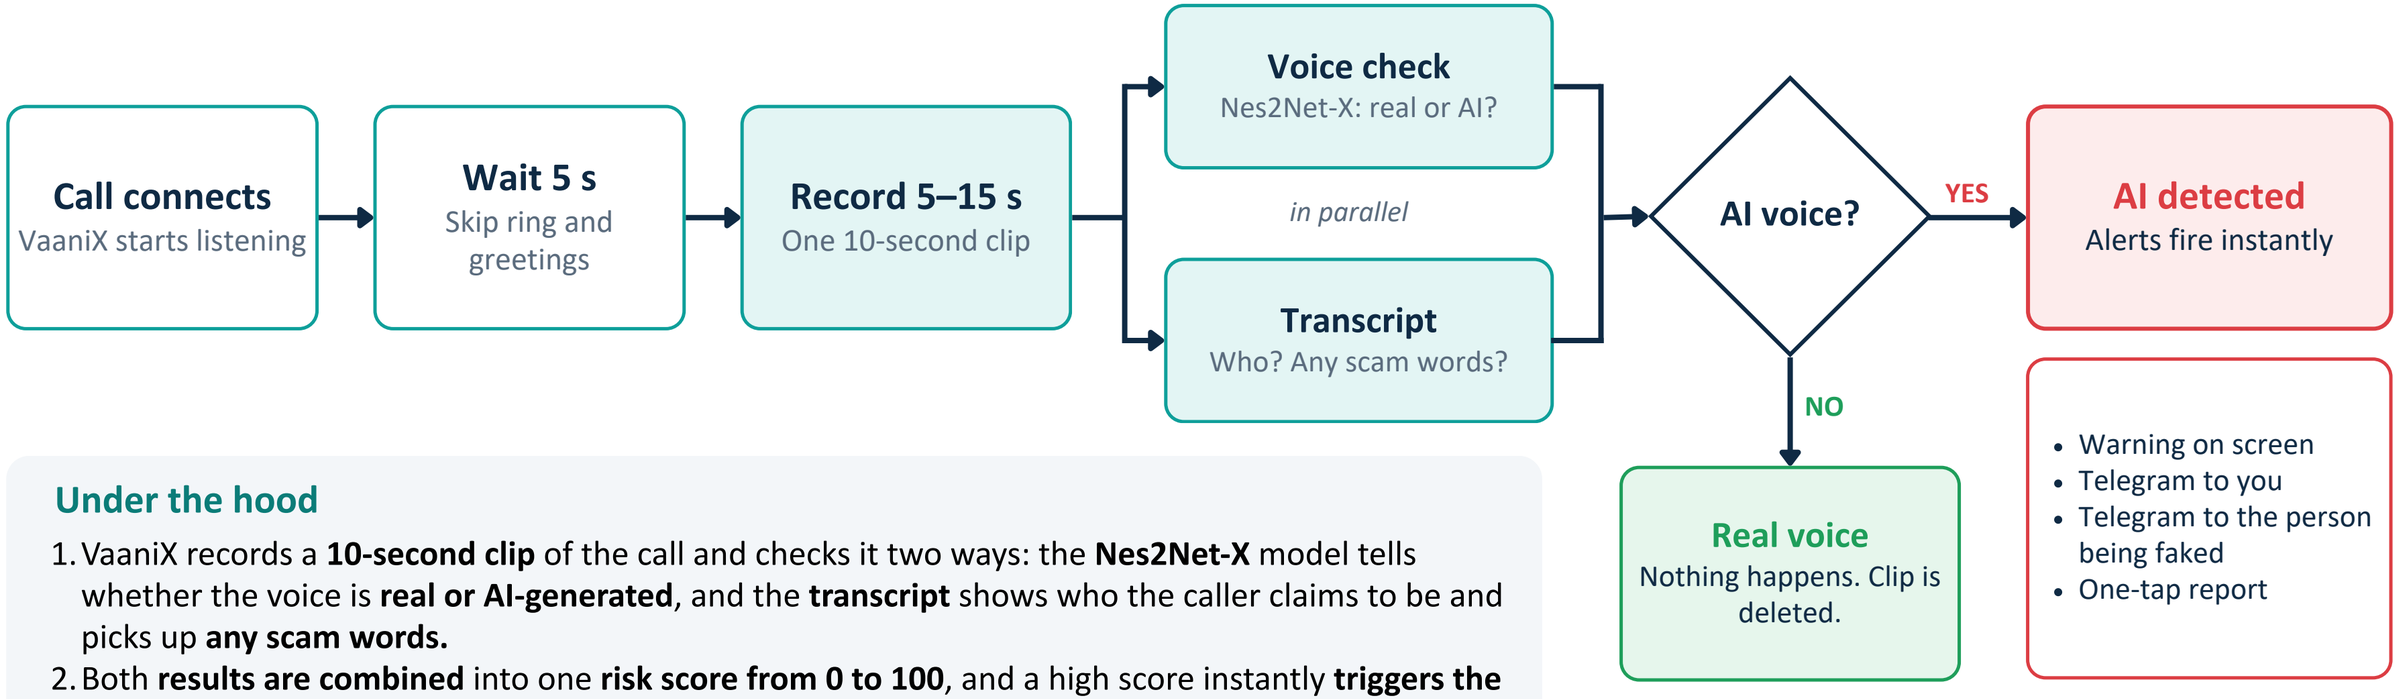

An AI tool clones the voice in minutes

"Mummy, accident ho gaya, jaldi paise bhejo!"

Parent panics and pays before checking

How VaaniX works: One 10-second check

From the moment the call connects to the alert on your screen.

Under the hood

1. VaaniX records a **10-second clip** of the call and checks it two ways: the **Nes2Net-X** model tells whether the voice is **real or AI-generated**, and the **transcript** shows who the caller claims to be and picks up **any scam words.**
2. Both **results are combined** into one **risk score from 0 to 100**, and a high score instantly **triggers the alerts**

When AI is detected, the right people know instantly

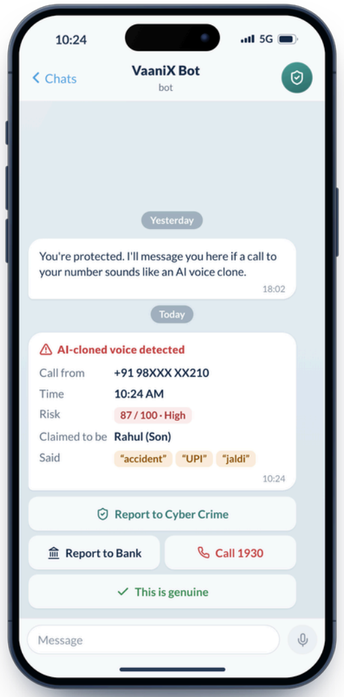

One AI verdict sends three warnings at the same time, so the scam can be stopped before any money moves.

On your screen, during the call

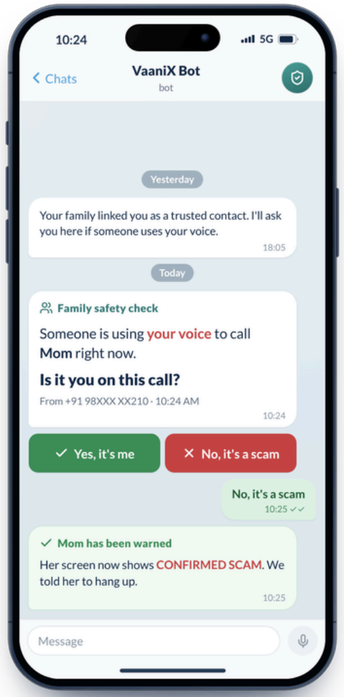

A red warning appears while the call is still going on, with the risk score and a clear “Don’t share OTP or send money”. End the call or report it in one tap.

Telegram, to you

A Telegram message shows the caller’s number, time, risk score, who they claimed to be and the scam words used. One tap to report to Cyber Crime or the bank, call 1930, or mark it genuine.

Telegram, to the real Rahul

The family member being copied is asked “Is it you on this call?”. If they tap “No, it’s a scam”, your screen changes to CONFIRMED SCAM and the number is added to Scam Radar.

Create Family Groups & Call Transcript

Add your family once. Using the transcript & your family tree our AI detects who the caller is pretending to be, so that person also gets warned.

1. Family Group: add your family once

Create a group → **Add members + relationship** → **Each taps a Telegram invite once**

Each member is saved with their name, nickname, relationship and real phone number. They join with one tap on a Telegram invite link, so no extra app is needed.

2. Call transcript: who is the caller pretending to be?

faster-whisper turns the 10-second clip into text (Hindi, English or Hinglish). VaaniX then checks the text for three things:

Names

“Main Rahul bol raha hoon” is matched to Rahul (Son) in your Family Group.

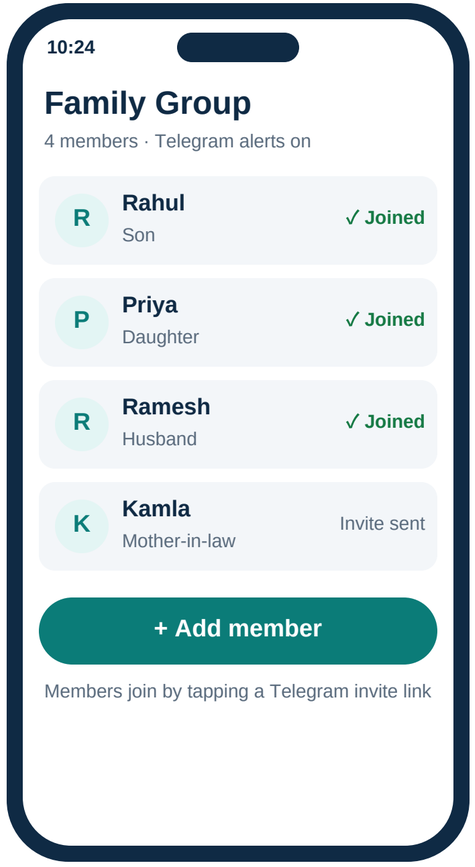

Relationship words

“Mummy”, “Papa” or “Beta” tell VaaniX which family member is being copied.

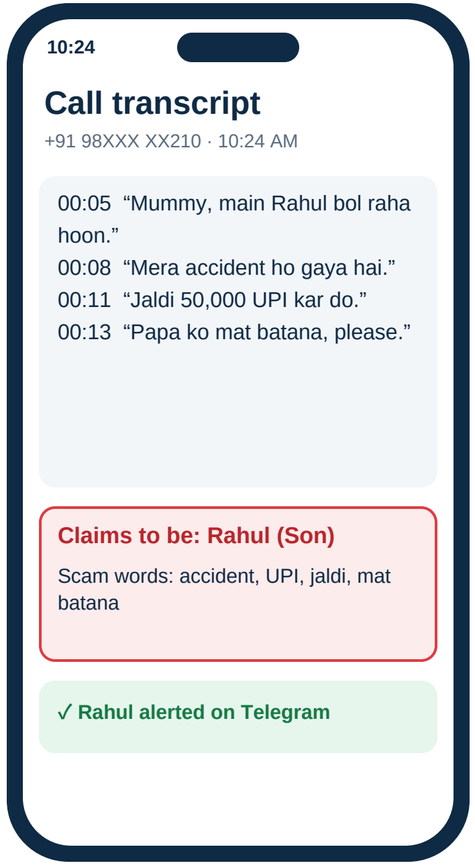

Scam words

UPI, jaldi, accident, mat batana raise the risk score and are saved as evidence.

Backups: caller-number match and a manual "They said they are ___" tag.
The transcript is also attached to complaints as evidence.

Family Group screen

Transcript screen

Scam Radar & Payment Guard

VaaniX protects people before they pick up a scam call, and again before they pay.

1. Scam Radar: Warns you before you pick up scammer's call

VaaniX detects same number as an AI voice call to multiple users → That number is marked as a "Potential scam" in our database → The next person it calls sees a red pop-up while it is still ringing

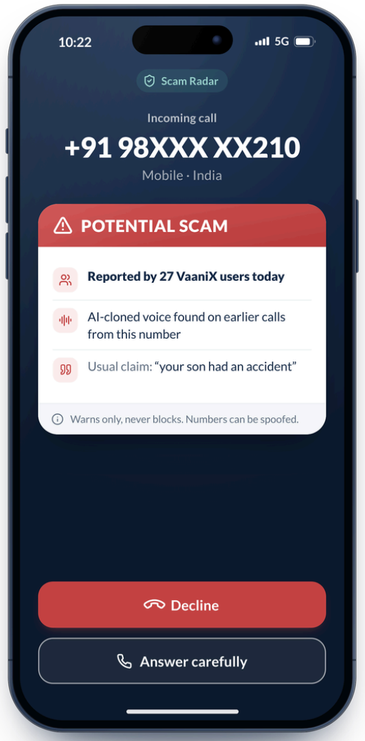

Protects everyone, not just family *Warns, never blocks (numbers can be spoofed)* *Works like caller-ID apps*

2. Payment Guard: A pause on UPI/Bank apps before the money moves

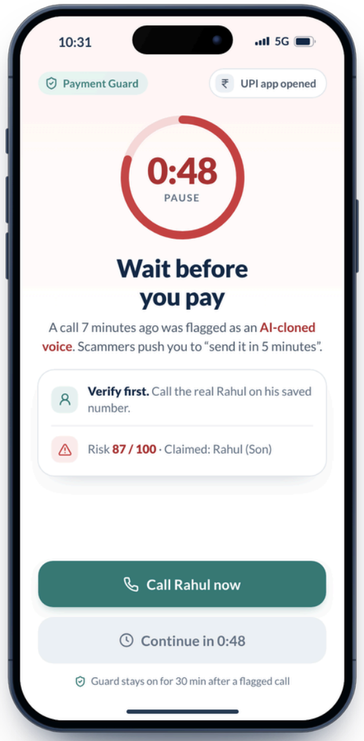

Most money is lost after the call ends, when the scammer says "send it in 5 minutes".

AI call detected during the call → **Guard turns ON for 30 minutes** → **User opens a UPI or bank app** → **Full-screen WAIT pause appears**

- On the WAIT screen: call the real Rahul in one tap or continue only after a 60-second wait.
- For banks: the same "recent scam call" signal is in our SDK, so they can add a check before big transfers.

Scam Radar: shown while the phone rings

Payment Guard: shown before you pay

One-Tap Reporting & API & SDK

Victims report in one tap using app or Telegram. Police, banks and telecom get clean, ready-to-use data through our APIs and SDK.

Report to Cyber Crime — Opens Gmail with a draft complaint to your state cyber crime cell

Report to Bank — Opens Gmail with a draft email asking your bank to freeze or flag the transaction

Call 1930 — Dials the national cyber fraud helpline, the fastest way to stop the money

This is genuine — Closes the alert and teaches the model to reduce false alarms

VaaniX API & SDK: Plugs into existing Telecom & Banking systems

POST `/v1/analyze`

Send audio, get back: AI or not, risk score, transcript and scam words

POST `/v1/complaint`

Sends a structured complaint straight into cyber police or bank systems

GET `/v1/evidence/{id}`

SHA-256 fingerprint proves the audio was never changed

SDK **Android SDK**

Banks, telecoms and phone makers build VaaniX into their apps and dialers

Result: faster complaint processing, with clean data instead of screenshots.

Who VaaniX Protects

One 10-second check. Four groups protected.

Families & elderly

Warned before they pick up, during the call, and before they pay. The real family member confirms in seconds.

Banks

Fraud flagged before the transfer, with a ready report and a risk score.

Cyber police

Clean, structured complaints with transcript and a tamper-proof evidence hash.

Telecom companies

One SDK inside the phone dialer protects millions of users at once.

Your voice is your identity. VaaniX protects it.
